FOL183 Foreign Language I					
Semester	Course Unit Code	Course Unit Title	L+P	Credit	Number of ECTS Credits
1	FOL183	Foreign Language I	2	2	2

Mode of Delivery:

Face to Face

Language of Instruction:

English (%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

The aim of the course is to improve the students' basic grammar, listening and reading skills at A1 level. It is aimed to improve the students' ability to understand short, simple texts containing the most commonly used words in the target language; to make short, simple descriptions of events; to understand simple, clear, short dialogues; to use grammatical structures correctly.

Teaching Methods and Techniques:

The content of the course is designed to teach basic grammar structures in the target language (such as articles, tenses, imperatives, pronouns and conjunctions), common vocabulary and phrases (such as daily routines, animals, common verbs and transport), and to improve the students' comprehension skills in reading and listening at A1 level (such as introducing a friend and describing people).

Prerequisites and co-requisites:**Course Coordinator:****Name of Lecturers:****Assistants:**

Instructor Akile BAŞARI Instructor Nihal TOPCU Instructor Büşra ŞANLI Instructor Duygu YAZICI AŞÇI Instructor Fatma Zehra KÖK

Recommended or Required Reading**Resources**

1. Azar, Betty Schramper, Fundamentals of English Grammar (New York: Pearson Education, 2003)
2. Murphy, Raymond, Essential Grammar in Use (Cambridge: Ca

17	FINAL EXAM		

Course Learning Outcomes

No	Learning Outcomes
C01	Students will be able to develop a positive attitude towards the target language.
C02	Students will be able to enhance their basic academic skills in order to communicate both in the academic environment and in daily life.
C03	Students will be able to use A1 level grammar structures and words in the target language.
C04	Students will be able to understand A1 level texts and dialogues in the target language.
C05	Students will be able to express themselves orally in the target language at A1 level.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Units and physical quantities		
2	Motion in one dimension		
3	Vectors		
4	Motion in two dimensions		
5	The laws of motion		
6	Applications of Newton's law		
7	Applications of Newton's law		
8	Work and kinetic energy		
9	Potential energy		
10	Conservation of energy		

Course Learning Outcomes

No	Learning Outcomes
C01	Defines the basic concepts of mechanics.
C02	Analyses the dynamics of single and many particle systems.
C03	Formulates mathematically kinematic processes in nature.
C04	Analyses mechanical problems using graphical methods.
C05	Solves the mechanical problems in view of laws and principles.
C06	Defines the relationship between the obtained physical results and technology.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	The concept of set, operations on sets. Function and its properties. Inverse function.		
2	The properties of the natural, the rational and the real numbers. The method of Induction.		
3	Numerical sequences and operation on them.		
4	The concept of limit, Convergent sequences, Monotone sequences, the Bolzano -Weierstrass's theorem.		
5	Limit points of a sequence, upper and lower limits, Cauchy's test for convergence.		
6	Cauchy's and Heine's definitions of limit of a function, Algebraic operations on limit.		
7	Cauchy's criterion on the existence of limit of a function, Infinite shrinking and growing functions.		
8	Continuity, Algebraic operations on the continuous functions, composition function and its continuity.		
9	Monotone functions, Continuity of the inverse of a function.		
10	Points of discontinuity of a function and their classification, The concept uniform continuity.		
11	Differential and derivative of a function, Geometric meaning of derivative. Differential and derivative of the inverse and the		
12	Methods for taking differential. Derivatives of the elementary functions. Higher differential and derivative. Local extremum.		
13	Fermat's, Rolle's, mean value and Darboux theorems. L'Hospital's rule.		
14	Taylor Formula, Finding of the extremum points, Investigation of the graphic of a function.		

Course Learning Outcomes

No	Learning Outcomes
C01	Identify the concept of set and operations on sets.
C02	Identify the concept of function and some elementary functions
C03	Use some properties of real numbers.
C04	Analyze sequences and the properties of sequences.
C05	Examine the limits of a sequence and a function.
C06	Use the properties of continuous function.
C07	Calculate derivation of a function.
C08	Draw a graph of a function.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	What is language? Definition and characteristics of language, emergence of languages.		
2	What is culture? Relation of language-culture, relation of language-thought, the role and importance of language in society.		
3	World languages, types of language, Turkish as standart language, written and spoken language.		
4	Classification of languages, place of Turkish among world languages.		
5	Development and historical periods of Turkish, alphabets that Turks used throughout history, span of usage of Turkish.		
6	Grammar, classification of phonemes in Turkish, phonetics of Turkish.		
7	Vowel and consonant harmony, sound changes, stress and intonation in Turkish.		
8	Midterm Exam		
9	Morphology, roots and affixes, derivational morphemes and their usage.		
10	Inflectional morphemes and their usage.		
11	Types of words: nouns, adjectives, pronouns.		
12	Types of words: adverbs, prepositions, conjunctions, interjections, verbs.		
13	Types of words: verbs.		
14	Syntax.		
15	Elements of sentence.		
16	Final Exam		
17	Final Exam		

Course Learning Outcomes

No	Learning Outcomes
C01	Identify concepts of language and culture
C02	Comprehend the characteristics of Turkish.
C03	Come to an understanding of development and historical periods of Turkish.
C04	Apply the rules regarding phonetics and phonology of Turkish.
C05	Recognise the types and groups of lexicon.
C06	Distinguish types and elements of sentence.

MEE104 Computer Aided Technical Drawing					
Semester	Course Unit Code	Course Unit Title	L+P	Credit	Number of ECTS Credits
2	MEE104	Computer Aided Technical Drawing	4	3	4

Mode of Delivery:

Face to Face

Language of Instruction:

English (%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

To have students experienced in technical drawing, to draw and read manufacturing drawing of a part, to guide during drawing stages, to draw (2D and 3D) in CAD environment.

Teaching Methods and Techniques:

Definitions and terms of technical drawing, technical drawing equipments, preparation of technical drawing sheets, standard fonts and heights of fonts, line types, properties and usage places of line types, drawing rules, geometrical drawings, inside and outside tangent drawings of lines with arcs, inside and outside tangent drawings of circles with each other; helical, ellipse, evolverment, cycloid, parabola and hyperbola drawings; scales, scales of enlargement and reduction, methods and planes of projection, views; auxiliary, special, rotated and local views; perspective views; isometric, cavalier, cabinet and bird's-eye projections; the terms and rules of dimensioning, sections and applications of sections, surface treatment symbols, surface quality, indication of surface conditions; definition of CAD system, operating CAD software, sample applications; learning line drawing on computer medium, arraying, conditional drawing, trimming; drawing circle and arc, adjusting view settings; drawing ellipse, polygon, polyline, spline, rectangular; moving, rearranging and scaling drawings; 3D solid modeling methods, dimensioning, obtaining section view, hatching, text, filleting, chamfering, extending, stretching, making block, replacing block, forming table and letterhead, calculating distance and area, view and zooming commands.

Prerequisites and co-requisites:**Course Coordinator:****Name of Lecturers:**

Dr. ALİ KALYON

Assistants:**Recommended or Required Reading**

Resources Kadir Gök, Arif Gök, AutoCAD 2015 September 2014 / 10th Edition / 616 pp., Gülesin M., Design and Modeling with AutoCAD 2007, 2007, Mehmet Şamil Demiryürek, AutoCAD 2007, 2007

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Importance of technical drawing, drawing equipments, drawing sheets and folding sheets, fonts and numbers.		
2	Definition of line and properties, geometrical drawings about lines, geometrical drawings about angles.		
3	Polygon drawings, circle drawings and drawings about tangent lines, tangent junction with arcs, ellipse drawings		
4	Types and methods of projection, basic projection planes, projection of lines, projection of planes.		
5	Views, first projection (ISO-E) method, third projection (ISO-A) method, selecting and placing views, drawing three views of a part		
6	Auxiliary views, special views, revolved views, inter section, section views and types of sections, section views of a part with hidden lines		
7	Completing missing views, drawing perspective from views, selecting enough views.		
8	Terms and rules of dimensioning, dimensioning systems, types of dimensioning and arranging dimensioning.		
9	Drawing circle and arc, adjusting view settings learning to draw ellipse, polygon, polyline, spline, rectangular.		
10	Moving, rearranging and scaling drawings dimensioning, obtaining section view, hatching, text.		
11	Filleting, chamfering, extending, stretching, making block, replacing block, forming table and letterhead, calculating distance and area.		
12	Introduction to three-dimensional (3D) drawing.		
13	Modify the surface properties.		
14	Sample 3D drawing		

Course Learning Outcomes

No	Learning Outcomes
C01	Drawing knows the commands.
C02	Knows Drawing Creation and Editing.
C03	Recognize the measurements.
C04	Knows the scanning process.
C05	Knows 3D Commands.

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

The aim of the course is to improve the students' basic grammar, listening and reading skills at A2 level. It is aimed to improve the students' ability to understand short, simple texts containing the most commonly used words in the target language; to make short, simple descriptions of events; to understand simple, clear, short dialogues; to use grammatical structures correctly.

Teaching Methods and Techniques:

The content of the course is designed to teach basic grammar structures in the target language (such as adjectives, nouns, tenses, quantifiers, modals, conditionals etc.), common vocabulary and phrases (such as vegetables and fruit, health and illnesses), and to improve the students' comprehension skills in reading and listening at A2 level (such as ordering food in a cafe).

16	FINAL EXAM		
17	FINAL EXAM		

Course Learning Outcomes

No	Learning Outcomes
C01	Students will be able to develop a positive attitude towards the target language.
C02	Students will be able to enhance their basic academic skills in order to communicate both in the academic environment and in daily life.
C03	Students will be able to use A2 level grammar structures and words in the target language.
C04	Students will be able to understand A2 level texts and dialogues in the target language.
C05	Students will be able to express themselves orally in the target language at A2 level.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Integral, indefinite integral and its main properties.		
2	Integration rules.		
3	Integral methods of trigonometric and irrational expressions, Elliptic integrals.		
4	The Riemann integral.		
5	Cluster of integral functions, The mean value theorem.		
6	The Newton-Leibniz formula for derivative of an integral.		
7	The estimates for sums and integrals: Young's inequality, Hölder's inequality, Minkowski's inequality.		
8	The improper integrals.		
9	Tests of the improper integrals.		
10	Areas in the definite integrals.		
11	Volume in the definite integrals.		
12	Arc Length and Surface Area of Revolution of definite integral.		
13	Series.		
14	Taylor and Maclaurin Series.		

Course Learning Outcomes

No	Learning Outcomes
C01	Define the concept of indefinite integral.
C02	Apply the methods of integration.
C03	Express the properties of the Riemann integral.
C04	Prove the theorems related to the Riemann integral.
C05	Solve the applications of definite integral.
C06	Identify the improper integral.
C07	State the basic properties of series and power series.

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

The purpose of this course is to introduce a clear understanding of the principles of rigid body mechanics and the assumptions and idealizations and then to give students the knowledge about equilibrium and internal force concepts, related applications.

Teaching Methods and Techniques:

Statics of particles: forces in plane, forces in space, equilibrium. Moment of a force, moment of a couple. Equivalent systems of forces on rigid bodies. Equilibrium in two dimensions. Equilibrium in three dimensions. Distributed forces: centroids and center of gravity. Analysis of structures: trusses, frames and machines. Internal forces in beams and cables. Friction. Moments of inertia of areas, moments of inertia of masses. Method of virtual work.

Objectives of the Course:

This course aims at comprehending elements of sentences and their functions to form sentences; introducing and applying types of written and spoken expressions, differentiating and correcting the mistakes in language exercises; getting acquainted with the rules regarding the preparation of research articles; and developing students' writing and speaking skills via texts chosen from Turkish and World literature, and history of thought.

Teaching Methods and Techniques:

This course is designed to teach the definition of sentence and elements of sentence; sentence analysis and examples of sentence analysis; types of sentences; composition skills; planning of written composition; types of written and oral expression and examples; means of expression and brainstorming in forming paragraphs; ambiguities in sentences; and the rules employed in the conduction of research articles.

1	Sentence: syntactical and semantical sentence categories.		
2	Sentence: Sentence categories according to the place and type of predicate.		
3	Orthographic rules.		
4	Orthographic rules.		
5	Punctuation rules.		
6	Ambiguity in sentences.		
7	Ambiguity in sentences.		
8	Midterm Exam		
9	Composition.		
10	Types of Expression.		
11	Brainstorming.		
12	Types of Written Expression.		
13	Types of Oral Expression.		
14	Types of Templates.		
15	Methods of Research Article Writing.		
16	Final Exam		
17	Final Exam		

Course Learning Outcomes

No	Learning Outcomes
C01	Comprehend and apply spelling rules and punctuation marks.
C02	Use Turkish language in a correct and elaborate manner.
C03	Apply methods and techniques used in research article writing.
C04	Classify sentences in accordance with their grammatical features
C05	Grasp and implement expression methods.

HST181 Atatürk'S Principles and History Of Revolutions I					
Semester	Course Unit Code	Course Unit Title	L+P	Credit	Number of ECTS Credits
3	HST181	Atatürk'S Principles and History Of Revolutions I	2	2	2

Mode of Delivery:

Face to Face

Language of Instruction:

English (%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

This course teaches the spirit and significance of Atatürk s Revolution which aimed at achieving contemporary civilization.

Teaching Methods and Techniques:

Introduction, Fall of the Ottoman Empire, Tanzimat and Islahat Eras, Tripoli and Balkan Wars, World War I, The Armistice of Moudros, the Occupation of Anatolia and the National Reactions, The Birth of the Turkish Revolution, Turkish War of Independence, The Armistice of Mudanya, The Treaty of Lausanne

Prerequisites and co-requisites:**Course Coordinator:****Name of Lecturers:****Assistants:**

Instructor Fatma ERTENInstructor Hamza ÜZÜMCÜAsist ProfDr. Ersin MÜEZZİNOĞLUAssociate Prof.Dr. Barış SARIKÖSEInstructor Levent DAĞAsist Prof.Dr. Cemile ŞAHİN

Recommended or Required Reading**Resources**

1. Armaoğlu, Fahir. (2004). 20. Yüzyıl Siyasi Tarihi. İstanbul: Alkim Yayınevi.
2. Berkes, Niyazi. (2012). Türkiye'de Çağdaşlaşma. İstanbul: YKY.
3. Candan, Ahme

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Introduction to the History of Turkish Revolution, The Aim of the Course, The characteristics of Turkish Revolution.		
2	The Sources of Turkish Revolution (Internal Causes of the Collapse of the Ottoman Empire(XVII and XIX centuries).		
3	The Sources of Turkish revolution (External Causes of the Collapse of the Ottoman Empire(XVII and XIX centuries).		
4	Reform movements of Ottoman Empire in the XVIII and XIX Centuries (Selim III- Mahmut II- Tanzimat- Islahat Eras), I.Co		
5	The Ottoman Empire at the Beginning of 20th Century, The Establishment of İttihat Terakki (Committee of Union and Progr		
6	National Struggle Era, Internal Conditions after Armistice, Minority Movements, Separatist, Useful and harmful Committees.		
7	Turkish War of Independence, Prewar Conditions, (Occupation of Izmir, Mustafa Kemal Pasha s Movements, Mustafa Kemz		
8	Amasya Protocol, The last Ottoman Parliament, the National Pact, Declaration of the Grand National Assembly, Occupation		
9	Insurrections, Entente States Actions: Paris Peace Conference, Conference of London , Conference of San Remo, The Trea		
10	War Of Independence, (The Fronts, Battle of I.Inönü and results), Battle of II.Inönü, Battles of Kütahya-Eskişehir.		
11	The Battle of Sakarya, Treaty of Ankara, Büyük Taarruz (Great Offensive).		
12	The Armistice of Mudanya, The Problems Before the Lausanne Conference: The problem of minority and Armenians, Capit		
13	The Treaty of Lausanne and its Significance, Articles of the Treaty.		
14	Overview of National Struggle Era.		
15	Midterm Exam is given between the 7th and 15th weeks.		
16	Final Exam		
17	Final Exam		

Course Learning Outcomes

No	Learning Outcomes
C01	Explain the final Era of the Ottoman Empire.
C02	Appreciate the situation of the new Turkish state s establishment.
C03	Develop awareness to build a bridge between the past and the future
C04	Express opinion about the problems of Turkey, by valuing the past.
C05	Appreciate the significance of the Treaty of Lausanne.

REN201 Manufacturing Processes					
Semester	Course Unit Code	Course Unit Title	L+P	Credit	Number of ECTS Credits
3	REN201	Manufacturing Processes	4	3	4

Mode of Delivery:

Face to Face

Language of Instruction:

English (%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

Understanding of basic principles and capabilities of commonly used manufacturing processes in industry

Teaching Methods and Techniques:

Production of pig iron, cast iron and steel. Production of nonferrous metals. Foundry. Design of cast workparts. Contemporary casting processes, special and die casting. Conventional and modern welding processes. Hot and cold working of metals. Principles of plastic deformation. Powder metallurgy. Machinability, cutting tools; tool life, tool geometry and tool materials. Methods of metal cutting. Turning, milling, shaping, planing, broaching, drilling and grinding operations. Nontraditional machining and other special processes. Engineering metrology and quality control; basic terminology, some measuring instruments and errors of measurement.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Casting Techniques.		
2	Sand casting, die casting. (Given homework 1, After a week of delivery)		
3	Investment casting, centrifugal casting		
4	Welding: Classification, arc welding (Given homework 2, After a week of delivery)		
5	Welding: Resistance welding, oxy-gas welding, other welding processes		
6	Cold and Hot Working of Metals: Definitions, rolling, forging methods (Given homework 3, After a week of delivery)		
7	Cold and Hot Working of Metals: Extrusion, wire drawing, other plastic methods		
8	Sheet metal working: Drilling / blanking, deep drawing (Given homework 4, After a week of delivery)		
9	Powder Metallurgy: Powder production, pressing, sintering, applications		
10	Machining: Theory, cutting tools		
11	Machining: Chip formation, cutting fluids, machinability (Given homework 5, After a week of delivery)		
12	Machining: Lathe machine and use		
13	Machining: Milling machine and use (Given homework 6, After a week of delivery)		
14	Grinding machine and precision machining methods		
15	Midterm Exam, done between 7 and 15 weeks. Topics forward is taken a week after the exam.		
16	Final Exam		
17	Final Exam		

Course Learning Outcomes

No	Learning Outcomes
C01	Use casting techniques.
C02	Make metal forming.
C03	Apply the methods of machining.
C04	Identify methods of powder metallurgy.
C05	Use measuring devices.
C06	Select the most appropriate manufacturing procedure.
C07	Make basic calculations about manufacturing procedures.
C08	Select the operating parameters to be used for manufacturing procedure.

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

To give information about basic materials and material selection. To gain knowledge and application skills about destructive and non-destructive inspection methods in the determination of mechanical and physical properties of materials. To improve the properties of materials and gain information about drawing and interpretation of equilibrium diagrams.

Teaching Methods and Techniques:

Classification of materials, Atomic structure, interatomic bonds, Bravais lattice and crystal systems, Crystal defects, X-ray analysis method, Allotropy, Mechanical properties of metals, Mechanical tests applied to materials, Publishing, Solidification, Methods of improving properties of metals, Forming mechanisms, Fe-Fe₃C equilibrium diagrams, Fe-Fe₃C equilibrium diagrams, TTT and equilibrium diagrams, Eutectic, eutectoid and peritectic transformations, Equilibrium diagrams of eutectic systems, Fe

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Materials science and engineering, Classification of materials, Material selection and design, Atomic structure, Atomic links,		
2	Crystal and crystal structures, Simple cubic, Surface center cubic, volume center cubic, Hexagonal tight packings		
3	Bravais lattice and crystal systems, X-ray diffraction pattern, Allotropy		
4	Crystal defects, Zero dimension, One dimensional, two and three dimensional faults, Dislocations		
5	Shaping mechanisms; Slip, twinning, grain boundary shift.		
6	Mechanical properties of materials, Destructive test methods, Tensile, compression and creep test		
7	Impact notch and toughness, bending, fatigue, hardness test methods and fracture		
8	Midterm		
9	Publishing and publishing mechanisms, Publishing and surface finishing methods		
10	Solidification of metals, nucleation and growth of crystals, solidification errors in metals,		
11	Mechanisms for improving the properties of metals Working hardening, Precipitation hardening, Grain hardening, Cold defc		
12	Gibbs phase law, Phase calculations, Evaluation of equilibrium diagrams		
13	Equilibrium diagrams of solid solutions, eutectic, eutectoid, peritectic systems		
14	Eutectic, eutectoid and peritectic transformations on Fe-Fe ₃ C equilibrium diagram and equilibrium diagram		
15	TTT and CCT conversion curves and triple phase diagrams		
16	final exam		
17	final exam		

Course Learning Outcomes

No	Learning Outcomes
C01	Classify engineering materials.
C02	He knows the structure of the material and can explain the ties between the materials.
C03	Know the crystallographic structure, can calculate the atomic occupancy factor.
C04	Classify crystal defects.
C05	Knows and explains the mechanisms of strength enhancement.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Introduction and Concept of Stress- Introduction- A Review of the Methods of Statics- Stresses in the Members of a Structure		
2	Introduction and Concept of Stress- Application to the analysis and design of simple structures- Stress on an oblique plane-		
3	Stress and Deformation Under Axial Loading- Normal strain under axial loading- Engineering stress-strain diagram- True stress and strain		
4	Stress and Deformation Under Axial Loading- Deformation under axial loading- Statically indeterminate cases- Thermal stress and deformation		
5	Stress and Deformation Under Axial Loading- Shear stress and deformation- Relation among the material properties- Stress and strain under shear		
6	Torsion- Stresses in a Shaft- Elastic deformation under torsion- Stress in the elastic range		
7	Torsion- Statically indeterminate shafts- Design of shafts- Stress concentrations in shafts		
8	Torsion- Plastic deformations under torsion- Elasto-plastic deformation under torsion- Residual Stresses under torsion		
9	Pure Bending- Deformations in a symmetric member under pure bending- Stresses and deformations in the elastic Range		
10	Pure Bending- Deformations in a transverse cross section- Bending of composite members- Stress concentrations		
11	Pure Bending- Plastic deformation- Elasto-plastic deformation- Residual stresses		
12	Pure Bending- Eccentric axial loading- Unsymmetric bending		
13	Analysis and Design of Beams for Bending- Shear and bending moment diagrams- Relations among diagrams		
14	Analysis and Design of Beams for Bending- Design of prismatic beams for bending- Nonprismatic beams		

Course Learning Outcomes

No	Learning Outcomes
C01	Explains the stress, types of stress and deformation.
C02	Calculates stresses, elasto-plastic stress and residual stresses under axial loading.
C03	Determines shear stresses and twist angles in shafts under torsion.
C04	Calculates normal stresses in beams exposed to simple bending.
C05	Draws the shear force and the bending moment diagrams along the beam depending on the loading and supports.

HST182 Atatürk'S Principles and History Of Revolutions II					
Semester	Course Unit Code	Course Unit Title	L+P	Credit	Number of ECTS Credits
4	HST182	Atatürk'S Principles and History Of Revolutions II	2	2	2

Mode of Delivery:

Face to Face

Language of Instruction:

English (%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

This course provides the Turkish youth with consciousness about Atatürk's Principles and Revolutions and educates them in accordance with Kemalism.

Teaching Methods and Techniques:

Political Reforms, Legal Reforms, Educational and Cultural Reforms, Economic Reforms, Social Reforms, Atatürk's Principles, Atatürk's Foreign Policy, Turkey in the World War II, The concept of Jeopolitics and Jeopolitics of Turkey.

Prerequisites and co-requisites:**Course Coordinator:****Name of Lecturers:****Assistants:**

Prof. Dr. Nurgün KOÇ Instructor Yunus GÖK Instructor Mustafa KARACA Instructor Fatma ERTEN Instructor Hamza ÜZÜMCÜ Instructor Yusuf TEKE

Recommended or Required Reading**Resources**

1. Armaoğlu, Fahir. (2004). 20. Yüzyıl Siyasi Tarihi. İstanbul: Alkim Yayınevi.
2. Berkes, Niyazi. (2012). Türkiye'de Çağdaşlaşma. İstanbul: YKY.
3. Candan, Ahme

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Revolutions in the field of political: Abolition of the Ottoman Sultanate; Proclamation of the Republic; Abolition of the Caliph		
2	Revolutions in the field of law; Revolutions in the field of education and culture		
3	Revolutions in the field of social life		
4	Revolutions in the field of economy and agriculture		
5	The establishment and development of the constitutional system		
6	Foreign policy and relations of Turkey (Turk foreign policy between 1923 to 1932)		
7	Foreign policy in the period of Republic: The Mosul Question, Exchange of population, Foreign school question, The entran		
8	Foreign policy in the period of Republic: The Balkan Entente, Sadabat Pact, The Montreux Convention of Straits, Hatay Que		
9	Principles of Atatürk: Republicanism, Nationalism, Populism		
10	Principles of Atatürk: Secularism, Etatism, Revolutionism		
11	Supplemental Principles		
12	Turkey after Atatürk		
13	Geopolitic and geopolitical position of Turkey		
14	General evaluation about Atatürk s Principles and History of Revolutions		
15	Mid-Term Exam		
16	Final Exam		
17	Final Exam		

Course Learning Outcomes

No	Learning Outcomes
C01	Appreciate the significance of Turkish Revolution.
C02	Estimate Atatürk's Principles in historical perspective.
C03	List the basic qualifications of Turkish foreign policy.
C04	Assess the recent Turkish history.
C05	Review current developments by comparing them with the historical conditions.

11	Temperature measurement. Devices used and their functions.	-	-
12	Energy productivity devices.	-	-
13	Uncertainty analysis.	-	-
14	Design and reporting of the experiments. Presentation of the reports.	-	-

Course Learning Outcomes

No	Learning Outcomes
C01	Upon successful completion of this course, students/learners will be able to: Obtain the measurement ability in experimental studies
C02	Define the speed, torqu and power measurement techniques.
C03	Analyze the experimental data.
C04	compute the uncertainty analysis for experimental studies.
C05	report the experimental results.

Mode of Delivery:

Face to Face

Language of Instruction:

English (9%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

The aim of this course is to realise and understand dynamic behaviours between rails and wheels, action taken by rail vehicles during cruise.

Teaching Methods and Techniques:

1. Rail vehicle types and dynamic behaviour of system elements, Vehicle - Rail interaction, 2. Train in motion: force, power, speed and resistances, 3. Motion related equations, adherence, traction effort, locomotive take-off action, slippage, 4. Locomotive power, traction force and drawing hook calculation, 5. Wheelset and Bogie behaviour, Wheel - Rail interaction, harmful motion for locomotives, Conditions affection Wheel - Rail wear and cruise comfort, cruise calculations. 6. Derailment, Nadal theory, causes for derailment and derailment prevention.

Prerequisites and co-requisites:**Course Coordinator:****Name of Lecturers:**

Dr. MEHMET EMİN AKAY

Assistants:**Recommended or Required Reading****Resources**

1. Handbook of Railway Vehicle Dynamics, Edited by Simon Iwnicki, CRC Press Taylor & Francis Group, Boca Raton, FL., 2006.
2. Fundamentals of rail vehicle dynamics; guidance and stability, A. H. Wickens, 2003.
3. Evren, Güngör, Demiryolu, Birsen Yayıncılık, İstanbul, 2003.
4. Uurlu, Ceylan, Demiryolu Araçlarının İleri Dinamiği, TCDD yayını, Ankara, Eylül, 1999.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Shear Stresses in Beams and Thin-Walled Members- Shear force on the horizontal face of a beam- Shear stress on the horizontal face of a beam		
2	Shear Stresses in Beams and Thin-Walled Members- Longitudinal shear force on a beam with arbitrary shape- Shearing stress on the horizontal face of a beam		
3	Transformations of Stress and Strain- Transformation of plane stress- Principal stresses, maximum shearing stress- Mohr's circle		
4	Transformations of Stress and Strain- General state of stress- Application of Mohr's circle to the three-dimensional analysis		
5	Transformations of Stress and Strain- Stresses in thin-walled pressure vessels- Transformation of plane strain- Mohr's circle		
6	Principal Stresses under a Given Loading- Principal stresses in a beam- Design of transmission shafts		
7	Principal Stresses under a Given Loading- Stress analysis under combined loadings		
8	Deflection of Beams- Deformation of a beam under transverse loading- Equation of the elastic curve- Direct determination		
9	Deflection of Beams- Statically indeterminate beams- Method of superposition- Application of superposition to statically indeterminate beams		
10	Deflection of Beams- Moment-area theorems - Bending-moment diagrams by parts- Use of moment-area theorems with statically indeterminate beams		
11	Columns- Stability of structures- Euler's formula		
12	Columns- Eccentric Loading; the Secant Formula- Design of Columns under a Centric Load- Design of Columns under an Eccentric Load		
13	Energy Methods- Strain energy- Elastic strain energy for normal stresses- Elastic strain energy for shear stresses- Strain energy for bending		
14	Energy Methods- Impact loading- Calculation of deflection using work and energy method- Calculation of deflection using Castigliano's method		

Course Learning Outcomes

No	Learning Outcomes
C01	Defines stress and strain components on structural members in various directions.
C02	Determines stress and strain components under combined loading.
C03	Determines the equation of the elastic curve of a beam using different methods.
C04	Calculates buckling of a column and analyze stability.
C05	Solves mechanics problems using different energy methods.
C06	Designs and selects structural components under various loading conditions.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	General information, units and definitions, system, forms of energy, properties of the system, state and balance.		
2	The zeroth law of thermodynamics, temperature, pressure, manometer, barometer and atmospheric pressure.		
3	Ideal gas laws, state changes		
4	Ideal gas laws, state changes		
5	Phase changes, property diagrams and tables of pure substances		
6	Phase changes, property diagrams and tables of pure substances		
7	Illustrate the P-v, T-v, and P-T property diagrams and P-v-T surfaces of pure substances		
8	Midterm Exam		
9	Specific heat, Internal energy, enthalpy and specific heat of ideal gases.		
10	Energy analysis of closed systems		
11	Internal energy enthalpy and specific heat of solids and liquids		
12	The principle of conservation of mass		
13	Flow work and fluid energy		
14	Energy analysis of continuous flow open systems		
15	Energy Analysis of Unsteady-Flow Processes		
16	Final Exam		

Course Learning Outcomes

No	Learning Outcomes
C01	Makes calculations about heat and temperature.
C02	Makes calculations related to concepts such as weight, specific gravity, mass, specific mass, pressure and absolute pressure.
C03	Makes calculations related to Ideal Gas Laws.
C04	Makes calculations related to the general equation of gases.
C05	create and analyze mathematical models for open and closed systems using basic conservation laws.

16	Final Exam		
17	Final Exam		

Course Learning Outcomes

No	Learning Outcomes
C01	List base business concepts of behavioral sciences and relationships among individual, environment individuality, culture, attitude.
C02	Put forward an opinion about employees behaviors.
C03	Explain organizational behaviors with modern management approaches.
C04	Recognize of management (Operations Management, Marketing, Accounting, Finance, Human Resources, Quantitative Methods and Management-Organization).
C05	Work effectively in multi-disciplinary research teams
C06	Orğütsele davranış teorileri yardımcı ile insan davranışları ile organizasyon arasında ilişki kurar.

MEE327 Computer Aided Design					
Semester	Course Unit Code	Course Unit Title	L+P	Credit	Number of ECTS Credits
5	MEE327	Computer Aided Design	3	3	4

Mode of Delivery:

Face to Face

Language of Instruction:

English (%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Elective

Objectives of the Course:

The main objective of this course is to teach the students the basics of AutoCAD programme in 2D and 3D.

Teaching Methods and Techniques:

This course is about learning a CAD software programme to be able to draw in 2 dimension. In this course the students will learn AutoCAD software programme to learn how to draw an architectural drawing or any other 2 and 3 dimensional drawings.

Prerequisites and co-requisites:**Course Coordinator:****Name of Lecturers:**

Dr. Mehmet Erdi Korkmaz

Course Category

Mathematics and Basic Sciences	: 20	Education	: 0
Engineering	: 30	Science	: 0
Engineering Design	: 30	Health	: 0
Social Sciences	: 0	Field	: 20

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Introduction, general information about CAD, basic drawing commands		
2	Layers, editing commands		
3	Drawing a simple floor plan		
4	Drawing a simple floor plan		
5	Block editor, Wblock, Hatch settings		
6	Block editor, Wblock, Hatch settings		
7	Text, Dimensions		
8	Plotting techniques, array, align, fillet		
9	Drawing section example		
10	Keyboard shortcut settings		
11	Dynamic blocks		
12	Dynamic blocks		
13	Layout sheets		
14	Presentation techniques		

Course Learning Outcomes

No	Learning Outcomes
C01	To use dimensions on an architectural drawing.
C02	To create Traditional Architectural Design Process steps in Digital Environment.
C03	To gain knowledge about 2D digital media
C04	To gain knowledge about 3D digital media

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Elective

Objectives of the Course:

Understand the importance of occupational health and safety in the context of the right to live. Emphasizing the importance of occupational health and safety in terms of employers and employees and presenting them in a structure combining theory and practice.

Teaching Methods and Techniques:

Basic concepts about Occupational Health and Safety (OHS). Basic working areas of ergonomics. Occupational safety concept. Causes of work accidents, prevention models, calculation of costs, investigation and reporting. Concept of occupational disease, types, prevention methods. Occupational safety methods in workshops and laboratories. Personal protectors and machine protectors. Fire and explosion prevention methods. Principles and objectives of first aid. OHS Legislation.

Social Sciences	: 10	Field	: 0

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Introduction to occupational health and safety.		
2	Fundamentals of occupational health and safety.		
3	Factors that are harmful in the workplace.		
4	Occupational safety management systems.		
5	Chemical risk factors.		
6	Physical risk factors.		
7	Biological risk factors.		
8	Material Safety Data Sheets and Preparation.		
9	Occupational accidents and prevention policies.		
10	Risk assessment and analysis methods.		
11	Risk assessment and analysis methods.		
12	Explosions and fires: Types of combustion and fire.		
13	Types of explosion and explosion.		
14	Preparing emergencies and emergency action plan.		

Course Learning Outcomes

No	Learning Outcomes
C01	Define basic concepts related to occupational health and safety.
C02	Express the importance of occupational health and safety in the framework of the right to live.
C03	Apply legal rules and principles to existing occupational health and safety disputes.
C04	Analyze occupational health and safety problems.
C05	Can solve problems related to occupational health and safety in the workplace.
C06	Learns the principles and objectives of first aid.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Introduction and basic concepts, heat transfer mechanisms: conduction, convection, and radiation.	-	-
2	One dimensional and general heat conduction equation.	-	-
3	Boundary and initial conditions, steady heat conduction in plane walls.	-	-
4	Thermal resistance concept and thermal resistance networks.	-	-
5	Heat conduction in cylinders and spheres.	-	-
6	Heat transfer from finned surfaces.	-	-
7	Transient heat conduction, lumped system analysis.	-	-
8	Midterm exam.	-	-
9	Transient heat conduction in large plane walls, long cylinders and spheres with spatial effects.	-	-
10	Fundamentals of convection.	-	-
11	External forced convection.	-	-
12	Internal forced convection.	-	-
13	Natural convection.	-	-
14	Fundamentals of thermal radiation.	-	-
15	Radiation heat transfer.	-	-

Course Learning Outcomes

No	Learning Outcomes
C01	Learns heat transfer mechanisms.
C02	Derives general heat conduction equations and reduces these equations to one and two dimensional heat transfer problems.
C03	Determines the boundary conditions for heat conduction problems and solves steady one-dimensional heat conduction problems.
C04	Gains knowledge about continuous heat conduction.
C05	Learns convection heat transfer.
C06	Learns fundamentals of radiation heat transfer.

Face to Face

Language of Instruction:

English (9%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Elective

Objectives of the Course:

To teach the basic concepts of labor law and employee-employer rights, basic properties of syndicates.

Teaching Methods and Techniques:

Individual Labour law: Concept of Labour Law, Sections of labour law, sources of labour law, Basics of labour law: employee, employer relationships, workplace, plant, Labor contracts and kinds, labour contracts making

Prerequisites and co-requisites:**Course Coordinator:****Name of Lecturers:****Assistants:**

Asist Prof.Dr. Celalettin BAYKARA

Recommended or Required Reading

Resources Elder L. Richard P. 2003, Analytical Thinking,

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Subject of Labor Law, basic concepts and history		
2	Application fields of individual labor law		
3	Labor contract, kinds and application		
4	Labor contract, kinds and application		
5	End of labor contract		
6	Results of end of labor contract		
7	Working regulation		
8	Specifically protected groups		
9	social security of labor		
10	Short term insurances		
11	Long term insurances		
12	Social security of free workers		
13	Social security of free workers		
14	Risk groups based on labor law		
15	Midterm exam is given between 7th and 15th weeks.		
16	Final Exam		
17	Final Exam		

Course Learning Outcomes

No	Learning Outcomes
C01	Explain labor law concepts
C02	Define concepts of labor safety and security
C03	Recognize employee-employer relationships
C04	Modify labour safest and job security
C05	Recognize labor contracts and kinds, labor contracts making
C06	İş sözleşmeleri nasıl yapılacağını açıklayabilir.

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

The ability of understanding basic static and strength information, classifying machine elements with their properties, understanding working mechanisms of systems, Selecting the proper machine element.

Teaching Methods and Techniques:

General concepts, Fatigue, Material selection, Riveted, welded, soldered connections. Force and torque load. Connectivity and power screws. Shafts. Two-dimensional analysis. Anchor bolts, springs. Oils, sliding and rolling bearings. The worm gears, helical and worm gear. Couplings and clutches. Belt - pulley systems. Chain - gear mechanisms. Friction gears.

Prerequisites and co-requisites:**Course Coordinator:****Name of Lecturers:****Assistants:**

Associate Prof.Dr. İbrahim ÇAYIROĞLU

Week	Topics	Study Materials	Materials
1	General concepts		
2	Fatigue		
3	Material selection		
4	Riveted, welded and soldered joints		
5	Force and torque load shafts.		
6	Screws		
7	Two-dimensional analysis		
8	Wedges and springs		
9	Friction and oils		
10	Sliding and rolling bearings		
11	Gears and worm gear mechanisms		
12	Couplings, clutches and brakes		
13	V - belt mechanisms (Giving Project 1, Turn 16 week)		
14	Chain mechanism, friction wheels (Giving Project 2, Turn 16 week)		
15	Midterm Exam, done between 7 and 15 weeks. Topics forward is taken a week after the exam.		
16	Final exam week		
17	Final exam week		

Course Learning Outcomes

No	Learning Outcomes
C01	Identify machine components and systems.
C02	Choose machine elements together with the manufacturing and design stages.
C03	Describe welding, soldering, adhesive bonded and riveted connections.
C04	Recognize elements using in shaft-hub, pins and pin connections.
C05	Do bolt sizing and connections calculations
C06	Recognize friction, lubrication.
C07	Describe sliding bearings and rolling bearings.
C08	Describe worm gears, worm systems, couplings, brakes, clutches, mechanisms of belt pulley.
C09	Calculate on the chain mechanisms and friction wheels

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Introduction to the main concepts of pairs of elements.		
2	According to the classification of construction of mechanisms, four bar linkage, slider-crank mechanism.		
3	Arm-slide mechanism, kinematics, kinematic chain, the definitions of degrees of freedom .		
4	Applications.		
5	Grubler Criteria and determining the degree of freedom of mechanisms, kinematic chain .		
6	Grashof's theorem and four-bar mechanisms.		
7	Applications.		
8	Midterm 1.		
9	Slider-Crank Mechanism, Inverted Slider-Crank Mechanism.		
10	Slider-Crank Mechanism, Inverted Slider-Crank Mechanism.		
11	Vector Loop Equations, Raven's Method, The Freudenstein Equation.		
12	Vector Loop Equations, Raven's Method, The Freudenstein Equation.		
13	General planar motion velocity and acceleration.		
14	General planar motion velocity and acceleration .		
15	Final exam.		

Course Learning Outcomes

No	Learning Outcomes
C01	To ensure the selection, development and design skills of a machine, part or process, the expected performance, manufacturing characteristics, affordability and efficiency
C02	To learn mechanism to analyze the problems encountered.
C03	To learn engineering design and analysis, such as computer software and modern methods of achieving the ability to use modern engineering techniques and knowledge
C04	To learn determination of the mechanisms in terms of high efficiency.
C05	Solving mechanism problems based on basic principles.

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

Understand the importance of occupational health and safety in the context of the right to live. Emphasizing the importance of occupational health and safety in terms of employers and employees and presenting them in a structure combining theory and practice.

Teaching Methods and Techniques:

Basic concepts about Occupational Health and Safety (OHS). Basic working areas of ergonomics. Occupational safety concept. Causes of work accidents, prevention models, calculation of costs, investigation and reporting. Concept of occupational disease, types, prevention methods. Occupational safety methods in workshops and laboratories. Personal protectors and machine protectors. Fire and explosion prevention methods. Principles and objectives of first aid. OHS Legislation.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Introduction to occupational health and safety.		
2	Fundamentals of occupational health and safety.		
3	Factors that are harmful in the workplace.		
4	Occupational safety management systems.		
5	Chemical risk factors.		
6	Physical risk factors.		
7	Biological risk factors.		
8	Material Safety Data Sheets and Preparation.		
9	Occupational accidents and prevention policies.		
10	Risk assessment and analysis methods.		
11	Risk assessment and analysis methods.		
12	Explosions and fires: Types of combustion and fire.		
13	Types of explosion and explosion.		
14	Preparing emergencies and emergency action plan.		

Course Learning Outcomes

No	Learning Outcomes
C01	Define basic concepts related to occupational health and safety.
C02	Express the importance of occupational health and safety in the framework of the right to live.
C03	Apply legal rules and principles to existing occupational health and safety disputes.
C04	Analyze occupational health and safety problems.
C05	Can solve problems related to occupational health and safety in the workplace.
C06	Learns the principles and objectives of first aid.

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Elective

Objectives of the Course:

This course explores intellectual property rights, patent application for the industrial design and its examination, rights derived from industrial patents, protection of the rights of designer and patent owners, and international agreements. This course is to train student's capacity in the thinking, method, and skill in industrial design. It is expected that the students will be able to understand and grasp the logic of design process for industrial artefacts.

Teaching Methods and Techniques:

Introduction to intellectual property rights, Product design and development, Industrial design, General provisions, Patent application for the industrial design and its examination. Industrial design patent, Rights derived from industrial patents, Industrial design use, Protection of the rights of designer and patent owners, International agreements, Examination of sample patents, Preparation of a sample patent.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Basic concepts and axioms, sets, counting	Reading	Course note
2	Permutation and combination	Reading	Course Note
3	Probability	Reading	Course Note
4	Conditional probability, independence	Reading	Course Note
5	Random variables	Reading	Course Note
6	Continuous and discrete random variables	Obtaining a real-world dataset	Course Note
7	Probability distribution functions of random variables	Reading	Course Note
8	Probability density functions of random variables	Reading	Course Note
9	Midterm Exam	Studying	Course Note
10	Gauss, Binomial distributions	Preparing distribution of a real-world da	Course Note
11	Binomial, Poisson distributions	Reading	Course Note
12	Geometric and negative binomial distributions	Reading	Course Note
13	Expected value	Calculating expected value on a dataset	Course Note
14	Expected values of random variables	Reading	Course Note
15	Central Limit Theorem	Reading	Course Note

Course Learning Outcomes**No Learning Outcomes**

C01	Applies the fundamental concepts of probability and statistics to real-world engineering problems.
C02	Constructs the probability distributions of random variables based on real-life scientific scenarios and data sets, and then uses it to find expectation and variance.
C03	Explains the fundamental concepts of probability theory.
C04	Learns basic probability distributions and applies them to real-world problems

Objectives of the Course:

The aim of this course is to introduce technical and humanistic aspects of industrial R&D and R&D management and to explain importance of technology, impacts of technology and permanent development of technology.

Teaching Methods and Techniques:

Configuration of technology and industry. Advantages of technology and competition. Technologic options, strategies and analitic tools. Partnerships and strategic agreements. Technology and structure. Technology and process. Technology and culture. Technology and total quality. Technology transfers. R&D management. R&D productivity. National politics and and R&D. Technoparks and innovational organizations. University-industry R&D association. Patents and legal regulations. R&D trends.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Configuration of technology and industry		
2	Advantages of technology and competition		
3	Technologic options, strategies and analitic tools		
4	Partnerships and strategic agreements		
5	Technology and structure		
6	Technology and process		
7	Technology and culture		
8	Technology and total quality		
9	Technology transfers		
10	Creativeness and change		
11	Creativeness and change		
12	National politics and and R&D		
13	Technoparks and innovational organizations. University-industry R&D association.		
14	Patents and legal regulations. R&D trends		
15	Midterm exam is given between 7th and 15th weeks.		
16	Final Exam		
17	Final Exam		

Course Learning Outcomes

No	Learning Outcomes
C01	Recognize R&D, R&D management and R&D techniques.
C02	Explain R&D concepts and differences between R&D concepts.
C03	Memorize principles for establishing R&D management system.
C04	Employ in-house R&D management.
C05	Recognize patents and legal regulations

MEE308 Dynamics Of Machinery					
Semester	Course Unit Code	Course Unit Title	L+P	Credit	Number of ECTS Credits
6	MEE308	Dynamics Of Machinery	3	3	3

Mode of Delivery:

Face to Face

Language of Instruction:

English (%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

The goal of this course is to record students with an understanding of basic concepts in the machine theory.

Teaching Methods and Techniques:

It expresses mechanism, machine descriptions, the basic elements of the transaction types are the basic mechanisms, mechanisms and machines units (arm mechanisms, crank-biyel mekanizmaları, etc.). Mechanisms of freedom. Machines, balancing; static and dynamic imbalance, equivalent to the masses, many-cylinder engines, crank-biyel mechanisms, balancing, balancing. Return to düzgünlüğü and the flywheel; return düzgünlüğü, volanın needs to be resized. Mechanical vibrations; Single-grade, sönümlü- sönümsüz degrees of freedom, free and forced vibration isolation, vibration study of the movements. Torsional vibrations.

Prerequisites and co-requisites:**Course Coordinator:****Name of Lecturers:**

Associate Prof.Dr. İsmail ESEN

Assistants:**Recommended or Required Reading**

Resources 1)John Uicker, Gordon Pennock and Joseph Shigley, Theory of Machines and Mechanisms
2)E. Söylemez, "Mechanisms", METU Publication No.64, 2000.,

MEE330 Introduction to Finite Element Analysis					
Semester	Course Unit Code	Course Unit Title	L+P	Credit	Number of ECTS Credits
6	MEE330	Introduction to Finite Element Analysis	3	3	4

Mode of Delivery:

Face to Face

Language of Instruction:

English (%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Elective

Objectives of the Course:

To teach different methods of solution of engineering problems by finite elements method.

Teaching Methods and Techniques:

Introduction to the finite element method, Element types, Spring and beam elements, Plane stress and plane strain elements. Expression of the geometry and element behavior function. Theory of interpolation functions and acquisition methods. Addition procedures and Joining the boundary conditions to system equations, Error and convergence analysis. Developing the stiffness matrix and load vector. Isoparametric finite elements, Computer applications. Developing program in FORTRAN and computer application Presentation of ANSYS finite element analysis program. Solution of various type of construction problems with the help of this program (Static analysis of beams and plates, static analysis of plane and space frame system).

MEE338 Numerical Analysis					
Semester	Course Unit Code	Course Unit Title	L+P	Credit	Number of ECTS Credits
6	MEE338	Numerical Analysis	2	2	2

Mode of Delivery:

Face to Face

Language of Instruction:

English (9%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

The aim of this course is to show approximate methods for solving mathematical problems that are not analytical solutions in the field of basic sciences and engineering in particular.

Teaching Methods and Techniques:

Taylor and McLaurin series, Approximate solutions of nonlinear equation systems, Linear equation systems, Finite differences, Interpolation, Numerical differentiation, Numerical integral, Euler, Taylor and Runge-Kutta methods

Prerequisites and co-requisites:**Course Coordinator:****Name of Lecturers:**

Dr. ÇİĞDEM İNCİ KUZU

Assistants:**Recommended or Required Reading**

Resources Numerical Methods for Engineers, S.C. Chapra, Numerical Analysis, Ziya Aktas, Hilmi Öncül and Saim Ural, ODTÜ, 1981.

Course Category

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Error analysis, linear equation solutions.		
2	Solution of Equation Teams.		
3	Solution of Equation Teams.		
4	Solution of Equation Teams.		
5	Nonlinear equation solutions.		
6	Interpolation.		
7	Numerical differentiation.		
8	Numerical integral.		
9	Solution of ordinary differential equations.		
10	Solution of ordinary differential equations.		
11	Solution of partial differential equations.		
12	Curve fitting.		
13	Curve fitting with least squares method.		
14	Curve fitting with least squares method.		

Course Learning Outcomes

No	Learning Outcomes
C01	Perform error analysis and solve linear equations
C02	Solve equations in a computerized environment
C03	Nonlinear solution
C04	Interpolations, derivatives and solutions
C05	Solve ordinary and partial differential equations
C06	Acceptance will fit the curve according to the experimental results; the least squares method and the finite element method.

Occupational Health and Safety II					
Semester	Course Unit Code	Course Unit Title	L+P	Credit	Number of ECTS Credits
6	CEC306	Occupational Health and Safety II	2	2	2

Mode of Delivery:

Face to Face

Language of Instruction:

English (%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

Understand the importance of occupational health and safety in the context of the right to live. Emphasizing the importance of occupational health and safety in terms of employers and employees and presenting them in a structure combining theory and practice.

Teaching Methods and Techniques:

Basic concepts about Occupational Health and Safety (OHS). Basic working areas of ergonomics. Occupational safety concept. Causes of work accidents, prevention models, calculation of costs, investigation and reporting. Concept of occupational disease, types, prevention methods. Occupational safety methods in workshops and laboratories. Personal protectors and machine protectors. Fire and explosion prevention methods. Principles and objectives of first aid. OHS Legislation.

Prerequisites and co-requisites:**Course Coordinator:****Name of Lecturers:**

Instructor İsmail TOPRAK

Assistants:**Recommended or Required Reading**

Social Sciences	: 10	Field	: 0

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Basics of occupational safety, occupational safety culture, related laws and regulations.		
2	Legal rights and responsibilities.		
3	Danger-Risk concept, protection of accidents.		
4	Major industrial accidents and large industrial enterprises: Examples of major industrial accidents related to fire, explosion		
5	Occupational diseases.		
6	Occupational health, work safety committees and duties established in the workplaces, SSK and health services.		
7	Toxicology: Toxic substances to be taken into the body, excretion and effects.		
8	Ergonomics and parameters.		
9	Working at height.		
10	Personal protective equipment.		
11	First aid and emergency.		
12	Working with display tools.		
13	Ventilation and air conditioning principles.		
14	OHS ethics.		

Course Learning Outcomes

No	Learning Outcomes
C01	Define basic concepts related to occupational health and safety.
C02	Express the importance of occupational health and safety in the framework of the right to live.
C03	Apply legal rules and principles to existing occupational health and safety disputes.
C04	Analyze occupational health and safety problems.
C05	Can solve problems related to occupational health and safety in the workplace.
C06	Learns the principles and objectives of first aid.

Weekly Detailed Course Contents

Week	Topics	Study Materials	Materials
1	Introduction to media planning and Media term		
2	Media planning term, Media kinds, Advantages and disadvantages of media		
3	Main terms about media planning (Reach, frequency, GRPs, CPM, CPP)		
4	Marketing strategy and media planning		
5	Media planning in PR and Media planning in advertising		
6	Media buying and planning in mass media		
7	Buying and planning in digital media		
8	Midterm		
9	Buying and planning in local media.		
10	Buying and planning in social media.		
11	Media buying and planning in outdoor advertising.		
12	Media planning process		
13	Determination of marketing goals Determination of target market/audience.		
14	Determination of geographical region,Determination of timing		
15	Campaign period Continuous pattern Flight pattern Pulsing pattern		
16	Final		
17	Final		

Course Learning Outcomes

No	Learning Outcomes
C01	Distinguish medias in terms of PR and advertising effects.
C02	Recognize main terms of media planning.
C03	Describe tools and methods for using media planning.
C04	Evaluate a media planning of a firm.

Language of Instruction:

English (9%100)

Level of Course Unit:

Bachelor's Degree

Work Placement(s):

No

Department / Program:

Railway Systems Engineering

Type of Course Unit:

Required

Objectives of the Course:

The main objective of the course is to provide the student with knowledge about engineering ethics and to do business in accordance with ethical values in business life.

Teaching Methods and Techniques:

Introduction to Ethics. Basic Principles of Ethics. Social Corruption. Ethics and Science Relations. Ethics and Community Relations. The Global and Universal dimension of Ethics. Relationship of Ethics with Morality, Conscience and Emotion. Engineering Ethics. Ethical behavior expected from an engineer. Professional Ethics and Unethical Issues in Business Life. Unethical behaviors in business life. Professional Corruption. Ethical Principles in Different Professions. Science Ethics. Authorities And Responsibilities In The Publication And Publishing Of Research Results.
